

Digital Signage

Jarob, Inc. and Jarob Digital brought a fresh convenience store identity to the interior and exterior of American Gas & Oil. We put our creative team on the project to create an elevation drawing for the design and utilized our value engineering and fabrication expertise to create and install the graphics package.

- The water drop image is digitally printed directly onto Sintra with a silver Gator-foam backer face and copy (top).
- Acrylic wave graphics curve around the store, bordered by X-EON tube lighting that is a cost-effective and attractive alternative to traditional neon lighting.

- The snow image is digitally printed to Gatorfoam. The letters for the Beer Cave display are composed of brushed aluminum face on Gatorfoam. The edges are painted in a color to match the brushed aluminum.

- In order to achieve an exterior-quality image that will withstand the elements, the American Gas & Oil logo is printed directly to Di-Bond and then clear-coated.

- Vinyl graphics are applied to a bowed back Sintra panel mounted directly to the countertop. The menu is pre-attached to the back of the menu board with nine reversible digitally printed flavor strips. The product is packaged in a knock-down condition and includes an instruction sheet for assembly and hole template for easy installation.

- The decorative wall covering throughout the store is printed directly onto vinyl. The swirls theme ties into the overall appearance of the store.
